

NOA ABRAHAO KIM

Software Engineer | Nashville, TN

noanonoa@gmail.com | noakim.io | [LinkedIn](#) | [GitHub](#) | English | Korean | Spanish | Portuguese

Full-stack software engineer with 5+ years of experience building customer-facing applications in Ruby on Rails, React, and Flutter across web and mobile in compliance-driven environments. Delivered FTC-regulated feature sets on deadline, reduced multiple median API response times by eliminating a critical N+1 bottleneck and redundant requests, and contributed to a MAUI-to-Flutter mobile migration using AI tooling. My QA foundation enables me to think beyond implementation, building software that is resilient, thoroughly tested, and customer-focused.

TECHNICAL SKILLS

Languages: Ruby, JavaScript, Java, SQL, Dart, C#, HTML, CSS, Sass

Frameworks: Rails, React, Spring Boot, Flutter, .NET MAUI, Tailwind

AI & Tools: Claude Code, IntelliJ, Dynatrace, Vim, Figma, Jira, Optimizely, Mixpanel

Cloud & Infra: AWS, REST APIs, Kafka, Docker, PostgreSQL, MySQL

Integrations: CI/CD, Stripe, Twilio, Klaviyo, Segment, GitLab pipelines, GitHub Actions

Testing: Test-Driven Development (TDD), RSpec, Jest/Vitest, JUnit, XUnit

EXPERIENCE

Ramsey Solutions | Franklin, TN

Software Engineer II

Aug 2024 – May 2026

- Led migration from AuthX to Subscription Service authorization model, replacing a company-wide legacy dependency within the application, translating subscription states into permissions, and refactoring supporting test infrastructure across 40+ files.
- Delivered FTC Click-to-Cancel compliance requirements ahead of federal deadline, including consent tracking, database migrations, and a three-year data retention solution.
- Eliminated a N+1 query issue that generated roughly 6,000 extra database queries with a 25-line SQL fix, significantly improving dashboard performance.
- Reduced median response time for PUT /scenarios by approximately 410ms (82%) by removing an unnecessary downstream API request.
- Contributed to EveryDollar's Financial Roadmap feature from .NET MAUI to Flutter, learning Flutter/Dart on the job and leveraging Claude Code to accelerate implementation and debugging during application migration.
- Diagnosed and resolved a production AWS Lambda-Zoom integration failure by identifying a webhook timeout mismatch and using API Gateway to return the required response in time.
- Built the team's first Kafka-consuming microservice to process subscription cancellation events, triggering downstream customer success workflows.
- Led `fl_charts` (Flutter charting library) proof of concept, presenting findings to CTO and senior engineers.
- Mentored 3 junior engineers on TDD, code quality, and focused PR sizing, improving code review efficiency and development practices.

Software Engineer I

Jan 2023 – Aug 2024

- Engineered onboarding flow integrating Stripe with legal document storage, cutting processing time 40% and removing a third-party DocuSign dependency.

- Built phone verification with Twilio Verify API, increasing lead quality 12% by filtering bots and accidental submissions; wrote the team's first PlantUML flow documentation.
- Diagnosed a week-long Klaviyo/Zoom/Salesforce webhook failure during a leadership transition, reverse-engineering undocumented webhook dependencies and producing system-wide documentation for the team.
- Implemented event-driven Klaviyo metric triggers for lead-coach matching, including schema design and unit tests, with care to avoid breaking downstream service contracts.
- Built coaching call booking system on OnceHub API, handling webhook events across the full booking lifecycle (scheduled, canceled, rescheduled) in Rails.
- Launched Financial Coach Master Training 2.0, merging two products into one LMS under a tight deadline.
- Built search, filter, and sort functionality with pagination using Rails, Ransack, and Kaminari, reducing large payload sizes and improving contact page performance.

Quality Engineer II

Aug 2021 – Jan 2023

- Wrote code fixes for self-identified bug tickets, demonstrating development capability and earning a transition to Software Engineer I.
- Earned ISTQB Foundation Level certification on the first attempt within three months of hire, while independently designing and building end-to-end testing strategies for RamseyPlus Coaching products.
- Executed manual and regression testing across three Rails & React web applications, documenting bugs with risk analysis and clear reproduction steps.
- Partnered with marketing teams to gather email testing requirements, catching copy errors and UTM tracking issues before launch to protect ad conversion data accuracy.

Upwork | Los Angeles, CA (remote)

Software Developer, Freelancer

Aug 2020 – Apr 2021

- Resolved database query issues and fixed responsive UI bugs for small business clients, securing first two freelance contracts post-bootcamp.

Fashion RNC, Inc. | Los Angeles, CA

Co-Owner, Sewing Machine Operator

Jan 2015 – Apr 2020

- Partnered with fashion designers and production owners to deliver completed garments on tight production deadlines, coordinating sales and fulfillment.
- Constructed women's apparel piece-by-piece and performed quality control troubleshooting, catching and resolving defects before shipment.

EDUCATION & CERTIFICATIONS

International Software Testing Qualifications Board — [Certified Tester Foundation Level \(CTFL\)](#) 2021

General Assembly (Remote) — [Certificate of Completion in Software Engineering](#) 2020
